

# BARDUKE™

## Kentucky Bluegrass

**Rapid germination and establishment with medium green color and great drought tolerance**

Barduke is a top performer ranking among the best in trials for Drought Tolerance, Summer and Fall Density, Spring Green-Up, Seedling Vigor and Disease Resistance. An excellent selection for multiple applications, Barduke is sure to perform and give your turf the performance needed for a quality stand.

### Key features

- Excellent year-round density
- Great spring green-up
- Out-competes weeds

**Traffic Tolerance**

**Drought Tolerance**

**Disease Resistance**

### Technical Information

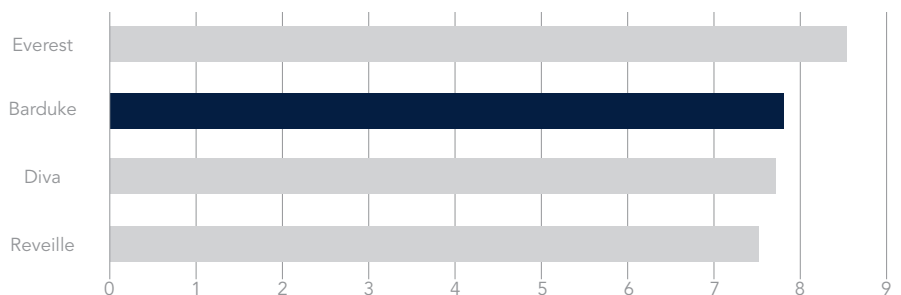

#### Applications

Barduke is a great bluegrass variety specially bred for rapid establishment to outcompete weeds and with high turf quality traits. Barduke is a stable performing variety which assures you optimum results as either a mono stand or as a component in a mixture or blend. Barduke is an excellent choice for use in lawns, sports fields, tees, fairways and semi-roughs. Barduke excels in mixtures with tall fescue, perennial ryegrass and red fescue.

#### Specifications

Seeding and establishment may be done in spring or fall, but be wary of summer or winter annuals. For better early weed control, consider an application of Mesotrione in the seeding process. Plant seeds to a depth of no more than 0.25-0.50" below the soil surface to ensure good seed to soil contact. Thatch layers will only slow or impede germination success. After spreading seed, keep seedbed moist throughout germination, with extra care during the early stages to prevent seed from drying out after initial seed imbibition. Germination should begin within 10 to 21 days and be complete within 35 days. Remember, the full turfgrass establishment process may take 6 months to a year.

#### Summer Density Rating

2006 NTEP | LSD 1.1

# FAST GERMINATION

### Maintenance

Seeding Rate: 2-3lbs/M\*

Mowing (Recommendation) 2-3"

Mowing (Down to) 0.500"

\*M=1,000 square feet
