

BARON™

Kentucky Bluegrass

Baron is Kentucky bluegrass royalty that is fit to be King.

Baron has been one the top selling bluegrasses in the world. Its ability to retain a good color and health under a low-maintenance schedule is sure to leave your lawn looking like the grounds of a palace.

Key features

- Versatile low maintenance variety
- Medium green color
- High seedling vigor
- Heat and drought tolerant

Traffic Tolerant

Low Maintenance

Disease Resistant

Technical Information

Applications

Baron is an excellent all-around variety with terrific wear tolerance. It displays excellent germination and plant vigor leading to a beautiful and tough turf. This variety will withstand a low maintenance schedule and keep its overall color and health intact. It has medium to dark leaf color and medium leaf texture, which make it an excellent component in many blends and mixtures including perennial ryegrass and tall fescue.

Specifications

Seeding and establishment may be done in spring or fall, but be wary of summer or winter annuals. For better early weed control, consider an application of Mesotrione in the seeding process. Plant seeds to a depth of no more than 0.25-0.50" below the soil surface to ensure good seed to soil contact. Thatch layers will only slow or impede germination success. After spreading seed, keep seedbed moist throughout germination, with extra care during the early stages to prevent seed from drying out after initial seed imbibition. Germination should begin within 10 to 21 days and be complete within 35 days. Remember, the full turfgrass establishment process may take 6 months to a year.
