

# HAVANA™

## Poa Trivialis

**Dark Green Color**

**Fine Leaf Texture**

**Disease Resistance**

### Improved variety developed for fall and winter overseeding of Bermudagrass.

Havana is an improved Poa trivialis developed for fall and winter overseeding of bermudagrass in the warm regions of the desert southwest, south, and southeast.

### Key features

- Excellent spring transition
- Great winter hardiness
- Excellent shade performance

**WINTER  
OVERSEED**

### Technical Information

#### Applications

Havana exhibits a quick, smooth spring transition allowing the rapid recovery of bermudagrass. It will not persist into the next overseeding year. With approximately 2.3 million seeds per pound, it can be used at low seeding rates as a monostand or blended with other Poa trivialis varieties. With rapid germination and fast establishment, Havana also performs well in overseeding mixtures with perennial ryegrass, fine fescue, and creeping bentgrass. Tested in overseeding trials in Florida, Mississippi and Arizona, Havana has demonstrated excellent spring transition, an improved, very dark green color, very fine leaf texture, excellent density, and a very attractive appearance on overseeded greens, tees, and all fine bermuda turf situations.

#### Maintenance

Seeding Rate:	10-20lbs./M* for greens 250-300lbs./M for fairways
Mowing (Recommendation):	2 - 3"
Mowing (Down to):	0.5"

\*M=1,000 square feet
