

INFERNO™

Tall Fescue

Inferno Tall fescue blazes with superior quality, fine leaf texture and an attractive dark green color.

A semi-dwarf stature with high turf density, Inferno has excellent durability under traffic. In independent turf trials, Inferno was compared to over 100 other Tall fescue varieties and continuously showed as a top performer.

Key features

- Quick Germination
- Great Summer Density
- Excellent Fall Color
- Brown Patch Resistance
- Gray Snow Mold Resistance

Disease Resistant

Dark Color

Traffic Tolerant

Technical Information

Applications

Put Inferno to the test. This excellent Tall fescue can stand up to the challenge. Well suited for full sun to partial shade, Inferno will perform on the golf course, community areas and parks, as well as home lawns. With excellent attributes and great genetics, this Tall fescue will strive beyond expectations. Blend it with other Tall fescues or mix it with other species like Kentucky Bluegrass. Inferno is also a great variety to be produced as sod.

Specifications

Keep seedbed moist to enhance germination. Germination should begin within 7 to 14 days and be complete within 21 days. The stand should establish in 30 days. Remember, the full turfgrass establishment process may take 6 months to a year. Mow at 1 to 4 inches, depending on use. Ideally maintain at 2 1/2 to 3 inch mowing height. Do not remove more than 1/3 of total plant height with each mowing. After establishment, a deep watering program is recommended to improve root depth. Irrigate according to turfgrass needs for your geographical area.

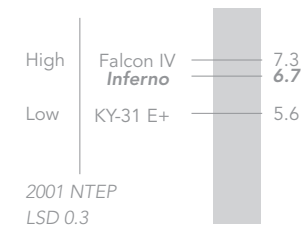

Maintenance

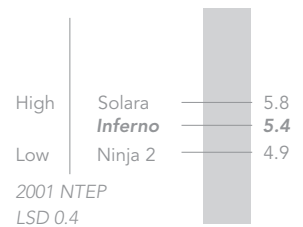

Seeding Rate:	6-10lbs/M*
Mowing (Recommendation)	1.5-3"
Mowing (Down to)	1"

*M=1,000 square feet
