

# SANDRINE™

## Chewings Fescue

**Shade Tolerant**

**Disease Resistant**

**Links-Style Putting Greens**

Sandrine is one of Barenbrug's recent releases of Chewings fescue that improves turf quality in many areas, especially at low mowing heights.

This Chewings fescue variety has a medium color and can form a very fine, dense turf stand capable of tolerating shade, cold winters, and low maintenance conditions such as low fertility, infrequent mowing, and reduced irrigation in cooler climates. It is resistant to Dollar Spot and Red Thread, common diseases under low input management applications.

### Key features

- Excellent Seedling Vigor
- Low Mowing Frequency
- Fast Green-Up
- Medium Green Color

**IMPROVED  
QUALITY  
AT LOW  
HEIGHTS**

## Technical Information

### Applications

Sandrine is a versatile fine fescue able to grow in low nutrient soils from coastal to northern areas of the United States and Canada. Low input requirements often lead to applications on golf courses and home lawns either in fine fescue blends or as multi-species mixtures.

Sandrine also shows high performance under low inputs in a putting green application. In a low input putting green study performed at University of Minnesota comparing fine fescue species and colonial bentgrasses, Sandrine finished the final year of the trial with the highest average turf quality score. Sandrine offers resistance to Dollar Spot and Red Thread, likely allowing it to withstand low input environments year over year as a sustainable solution in applicable climates.

### Maintenance

Seeding Rate:	4-6lbs./M*
Maintained at Turf Heights:	0.5-1lbs./M (thin)
Unmown Areas:	3-5lbs./M (dense)
Overseeding into Existing Turf:	6-10lbs./M
Mowing (Recommendation):	1.5-3.0"
Mowing (Down To)	0.200"

\*M=1,000 square feet
